Tax Matters

More Attention on Tax-Aware Investing Is a Good Thing for the Industry and Investors

August 6, 2026

We've shared publicly what we've learned about tax-aware long/short investing for fifteen years now.[1], [2] Whether in peer-reviewed publications,[3] award-winning research articles,[4] blogs on our site,[5] or short-form video,[6] we've been clear about how it works,[7] how to make it better,[8] and what investors should evaluate when considering it.[9]

Of course, AQR didn't invent tax-aware investing; even a decade in, we're relative newcomers. The overall ecosystem is huge – take direct-indexing, a roughly $1.2 trillion industry.[10] What was decades ago a financial innovation has since improved outcomes for hundreds of thousands of investors[11] by providing a tax-efficient way to participate in equity market growth.

Tax-aware *long/short* is a relatively recent innovation, comparatively small, but getting more attention among investors,[12] researchers, and the media. This attention has brought with it a range of perspectives, narratives, and debates. And we think that's a good thing.

In our view, interest from the broader tax, investment, and academic community can help identify and prevent practices that could undermine investor confidence in these strategies. If anything, responsible participants – both managers and investors – should benefit from transparency and education that would help differentiate strategies on the basis of their economic substance and expected pre-tax profits.

We have consistently maintained that tax-aware investing should be based on credible and time-tested investment strategies. In keeping with this principle, we offer the same investment strategies to both tax-exempt institutions and clients whose objective is instead strong after-tax returns, particularly because for investment strategies such as ours, tax efficiency can be effectively balanced with pre-tax profits. We would be doing a disservice to those clients who seek after-tax returns if we failed to take tax consequences into account when tax-awareness fits naturally into our investment process and is designed to operate in accordance with relevant guidance and regulations.

Thoughtful evidence-based discussion that gives appropriate attention to costs, benefits, and limitations of tax-aware strategies across their full lifecycle, including long-run economic outcomes and liquidation tax liabilities, can be useful. While, for economically profitable strategies, there is meaningful value in deferral, the exit tax can be significant. Indeed, we encourage all investors and advisors to look beyond the top-line metrics and examine investors' net after-tax position, including when liquidation taxes are accounted for. We believe this type of constructive dialogue can help the industry better serve investors, which is always one of our utmost goals.

[2] Some additional perspective is important: Although we have published a number of articles on tax-aware investing, they represent only a sliver of AQR's overall research on investment signals, portfolio construction, and asset allocation. Our articles on tax-related topics always cite the relevant investment-focused literature, which serves as a foundation for tax-aware long-short factor strategies.
